Annual Wellness Checkup

The key to a healthy pet is prevention and early detection of disease.

The gradual onset of health problems in an apparently healthy pet often go unnoticed. There are many conditions that can be completely reversed or controlled for extended periods of time if they are diagnosed early. Regular dental care, vaccinations, proper nutrition, and control of parasites are essential to ensure that your pet remains as healthy as possible. In addition, preventive health screening through routine blood testing is very important to identify problems early. Our goal is for your pet to live as long as possible. Our Annual Wellness Program will add years to your pet's life by early detection and prevention of disease.

Our Annual Wellness Program Includes:

- ⇒ Comprehensive Physical Exam
- ⇒ Wellness Chemistry Profile
- ⇒ Complete Blood Count (CBC)
- ⇒ Nutritional and Behavioral Consultation
- ⇒ Parasite testing
- ⇒ Annual vaccinations

*During your pet's physical exam, one of our veterinarians will explain any abnormal findings and recommendations to you as well as discuss your pet's diet. Blood and stool samples will be collected by one of our trained veterinary technicians. The results of these tests will be back normally within 24-48 hours, and a veterinarian will call you to let you know if all of the test results were normal. If there are any abnormalities, these will be explained to you and medication or further testing may be advised.
